1. How many weights are greater than or equal to 0?

68419

---

1 point

2. Of the three data points in sample_test_data, which one has the lowest probability of being classified as a positive review?

- ○ First
- ○ Second
- ◉ Third

---

1 point

3. Which of the following products are represented in the 20 most positive reviews?

- ☐ Snuza Portable Baby Movement Monitor
- ☐ MamaDoo Kids Foldable Play Yard Mattress Topper, Blue
- ☑ Britax Decathlon Convertible Car Seat, Tiffany
- ☐ Safety 1st Exchangeable Tip 3 in 1 Thermometer

---

1 point

4. Which of the following products are represented in the 20 most negative reviews?

- ☑ The First Years True Choice P400 Premium Digital Monitor, 2 Parent Unit
- ☐ JP Lizzy Chocolate Ice Classic Tote Set
- ☑ Peg-Perego Tatamia High Chair, White Latte
- ☑ Safety 1st High-Def Digital Monitor

---

5. What is the accuracy of the sentiment_model on the test_data? Round your answer to 2 decimal places (e.g. 0.76).

0.91

---

1 point

6. Does a higher accuracy value on the training_data always imply that the classifier is better?

- ○ Yes, higher accuracy on training data always implies that the classifier is better.
- ◉ No, higher accuracy on training data does not necessarily imply that the classifier is better.

---

7. Consider the coefficients of simple_model. There should be 21 of them, an intercept term + one for each word in significant_words.

How many of the 20 coefficients (corresponding to the 20 significant_words and excluding the intercept term) are positive for the simple_model?

10

---

1 point

8. Are the positive words in the simple_model also positive words in the sentiment_model?

- ◉ Yes
- ○ No

---

1 point

9. Which model (sentiment_model or simple_model) has higher accuracy on the TRAINING set?

- ◉ Sentiment_model
- ○ Simple_model

---

1 point

10. Which model (sentiment_model or simple_model) has higher accuracy on the TEST set?

- ◉ Sentiment_model
- ○ Simple_model

---

1 point

11. Enter the accuracy of the majority class classifier model on the test_data. Round your answer to two decimal places (e.g. 0.76).

0.84

---

1 point

12. Is the sentiment_model definitely better than the majority class classifier (the baseline)?

- ◉ Yes
- ○ No
