1 point	1.	From the section "Effect of L1 penalty": Consider the simple model with 2 features trained on the entire sales dataset.
point		Which of the following values of l1_penalty <u>would not</u> set w[1] zero, but <u>would</u> set
		w[2] to zero, if we were to take a coordinate gradient step in that coordinate? (Select all that apply)
		1.4e8
		1.64e8
		1.73e8
		1.9e8
		2.3e8
1	2.	Refer to the same model as the previous question.
point		Which of the following values of l1_penalty would set both w[1] and w[2] to zero, if
		we were to take a coordinate gradient step in that coordinate? (Select all that apply)
		1.4e8
		1.64e8
		1.73e8
		1.9e8
		2.3e8
1	3.	From the section "Cyclical coordinate descent": Using the simple model (with 2 features),
point		we run our implementation of LASSO coordinate descent on the <u>normalized</u> sales dataset. We apply an L1 penalty of 1e7 and tolerance of 1.0.
		Which of the following ranges contains the RSS of the learned model on the normalized dataset?
		Between 8e13 and 2e14
		Between 2e14 and 5e14
		Between 5e14 and 8e14
		Between 8e14 and 1e15
		Between 1e15 and 3e15
1	4.	Refer to the same model as the previous question.
point		Which of the following features were assigned a zero weight at convergence?
		constant
		sqft_living
		bedrooms
1 point	5.	In the section "Evaluating LASSO fit with more features", we split the data into training and test sets and learn weights with varying degree of L1 penalties. The model now has 13 features.
0.0000000000000000000000000000000000000	5.	and test sets and learn weights with varying degree of L1 penalties. The model now has
0.0000000000000000000000000000000000000	5.	and test sets and learn weights with varying degree of L1 penalties. The model now has 13 features. In the model trained with I1_penalty=1e7, which of the following features has non-
0.0000000000000000000000000000000000000	5.	and test sets and learn weights with varying degree of L1 penalties. The model now has 13 features. In the model trained with I1_penalty=1e7, which of the following features has non-zero weight? (Select all that apply)
0.0000000000000000000000000000000000000	5.	and test sets and learn weights with varying degree of L1 penalties. The model now has 13 features. In the model trained with I1_penalty=1e7, which of the following features has non-zero weight? (Select all that apply) constant
0.0000000000000000000000000000000000000	5.	and test sets and learn weights with varying degree of L1 penalties. The model now has 13 features. In the model trained with I1_penalty=1e7, which of the following features has non-zero weight? (Select all that apply) constant sqft_living
0.0000000000000000000000000000000000000	5.	and test sets and learn weights with varying degree of L1 penalties. The model now has 13 features. In the model trained with I1_penalty=1e7, which of the following features has non-zero weight? (Select all that apply) constant sqft_living grade
0.0000000000000000000000000000000000000		and test sets and learn weights with varying degree of L1 penalties. The model now has 13 features. In the model trained with I1_penalty=1e7, which of the following features has non-zero weight? (Select all that apply) constant sqft_living grade waterfront
point	 6. 	and test sets and learn weights with varying degree of L1 penalties. The model now has 13 features. In the model trained with I1_penalty=1e7, which of the following features has nonzero weight? (Select all that apply) constant sqft_living grade waterfront sqft_basement This question refers to the same model as the previous question. In the model trained with I1_penalty=1e8, which of the following features has non-
point 1		and test sets and learn weights with varying degree of L1 penalties. The model now has 13 features. In the model trained with I1_penalty=1e7, which of the following features has nonzero weight? (Select all that apply) constant sqft_living grade waterfront sqft_basement This question refers to the same model as the previous question. In the model trained with I1_penalty=1e8, which of the following features has nonzero weight? (Select all that apply)
point 1		and test sets and learn weights with varying degree of L1 penalties. The model now has 13 features.
