3. (True/False) When training an LDA model, changing the ordering of words in a document does not affect the overall joint probability.

- ◉ True
- ○ False

---

1 point

4. (True/False) Suppose in a trained LDA model two documents have no topics in common (i.e., one document has 0 weight on any topic with non-zero weight in the other document). As a result, a single word in the vocabulary cannot have high probability of occurring in both documents.

- ○ True
- ◉ False
